

# FeedbackFruits

FeedbackFruits improves higher education by supporting blended learning with the use of four software tools. Tools designed to create more interaction between students and the teacher, but also to help increase the ability to learn.

Software itself, however, isn't going to make a change if a teacher doesn't change its approach in educating students. Therefore, we not only provide tools, but also training and assistance to help teachers create a better course. And this works well! Teachers who used FeedbackFruits experienced:

- More interaction with their students and peer2peer learning.
- More engaged students.
- Education became more fun.

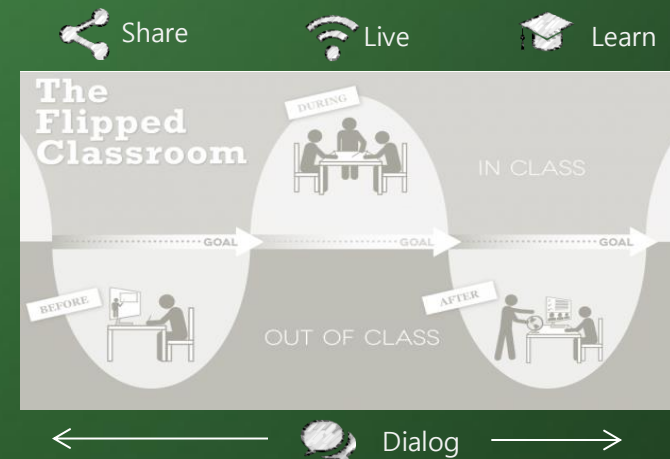

## What is FeedbackFruits?

In essence FeedbackFruits is a platform structured around four tools: Share, Live, Learn and Dialog. Share to easily discuss lectures, videos and documents using inline commenting. Live to support interaction in large classes. Learn, for peer2peer learn using flip cards. And Dialog, to support Facebook like communication /interaction, such as an up to date overview of all recent activity and personal notifications. To avoid switching endlessly between study platforms, our tools can be integrated in any platform, like Blackboard, Canvas, Moodle, etc.

## The idea behind FeedbackFruits

Often, higher education is about a teacher in front of a large class, passing through knowledge, while students passively absorb as much as possible. But passing through knowledge doesn't mean students are actually learning much.

New ideas and possibilities to make education more effective have been developed in the past few years such as: *blended learning and flipping the classroom*. FeedbackFruits facilitates these new forms of learning, for example by supporting all three stages in flipping the classroom:

More information on FeedbackFruits and our products can be found on our website. Also the icons have links to online videos. We are more than happy to drop by and give a live presentation on the software.
